

Name: <Yena Lee>

Report date: <Dec 28, 2022>

Internship Batch:<LISUM16>

## 1. Develop prediction model (Random Forest Model)

```
# Select independent and dependent variables\
X = df[["City", "Gender", "Age", "Income"]]
y = df["Illness"]

# Splitting the data into training and testing
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, random_state=42)

# Feature scaling
sc = StandardScaler()
X_train = sc.fit_transform(X_train)
X_test = sc.transform(X_test)

# model
classifier = RandomForestClassifier()

# fit model
classifier.fit(X_train, y_train)

# pickle
pickle.dump(classifier, open("model.pkl", "wb"))
```

## 2. Deployment

```
app = Flask(__name__)

model = pickle.load(open("model.pkl", "rb"))

@app.route("/")
def home():
    return render_template("index.html")

@app.route("/predict", methods = ['POST'])
def predict():
    float_features = [float(x) for x in request.form.values()]
    features = [np.array(float_features)]
    prediction = model.predict(features)

    return render_template("index.html", prediction_text = "Is the person ill? (Yes or No) {}".format(prediction))

if __name__ == '__main__':
    app.run(port = 3000, debug=True)
```

### 3. Html file

```
<body>
  <div class = "login">
    <h1 class="text-center">
      Illness prediction
    </h1>

    <form action="{{ url_for('predict')}}" method="post">
      <input type = "text" name = "City" placeholder="Austin(1)/Boston(2)/Dallas(3)/Los Angeles(4)/Mountain View(5)"
      <input type = "text" name = "Gender" placeholder = "Male(0)/Female(1)" required = "required"/>
      <input type = "text" name = "Age" placeholder = "age" required = "required"/>
      <input type = "text" name = "Income" placeholder = "income" required = "required"/>

      <button type = "submit" class = "btn btn-primary btn-block btn-large">predict</button>
    </form>

    {{prediction_text}}
  </div>
</body>
```

### 4. Final

## Illness prediction

<input type="text" value="Austin(1)/Boston(2)/Dallas(3)"/>	<input type="text" value="Male(0)/Female(1)"/>	<input type="text" value="age"/>	<input type="text" value="income"/>	<input type="button" value="Predict"/>
